2 INLEIDING

Voor het programma Monitoring Waterstaatkundige Toestand des Lands (MWTL) zijn in de zoete en zoute Nederlandse rijkswateren een chemisch, fysisch en biologisch meetnet ingericht. Dit document beschrijft de operationele planning van de activiteiten voor het chemisch en biologisch meetnet in 2010.

2.1 Verantwoordelijkheid en uitvoering

De verantwoordelijkheid voor de uitvoering van het monitoringsprogramma ligt bij de specialistische dienst van Rijkswaterstaat, de Waterdienst. De organisatie van de uitvoering is voor het merendeel een taak van de meetdiensten (MID'n) van de regionale diensten van Rijkswaterstaat. De Waterdienst heeft deze activiteiten gespecificeerd in functionele eisen (v/h 'meetaanvragen'). De meetdienst kan er voor kiezen (een deel van) deze activiteiten aan marktpartijen uit te besteden. Zo worden bijvoorbeeld de monsternemingen oppervlaktewater in het Waddengebied al vanaf medio 2008 uitbesteed. Een aantal activiteiten worden rechtstreeks door de Waterdienst uitbesteed aan marktpartijen of PGO's. Deze activiteiten zijn grotendeels vastgelegd in projectplannen. Het betreft hier o.a. onderzoek in biota.

2.1.1 Nieuwe landelijke dienst Rijkswaterstaat Waterdienst

Het Rijksinstituut voor Kust en Zee (RIKZ), Rijksinstituut voor Integraal Zoetwaterbeheer (RIZA) en Dienst Weg- en Waterbouwkunde (DWW) zijn per 1 oktober 2007 opgehouden te bestaan. Alle financiële en contractuele verplichtingen zijn per genoemde datum automatisch overgaan naar de nieuwe landelijke dienst Rijkswaterstaat Waterdienst. De vestigingslocatie is Lelystad. De vestigingen te Den Haag, Middelburg, Haren, Dordrecht, Arnhem en Delft zijn opgeheven in 2008.

2.2 Informatiebehoefte en doel MWTL

Uitgangspunt voor het meetprogramma in de zoete rijkswateren is de nota Monitoring Zoete Rijkswateren (RWS RIZA nr.99.004), aangepast aan de wijzigingen die voortkomen uit de in 1996 uitgevoerde actualisatie aangevuld met de MLC-lijsten die t.b.v. de Kaderrichtlijn Water zijn opgesteld. Uitgangspunt voor het meetprogramma in de zoute rijkswateren is het laatste evaluatie- en strategiewerkdocument (RWS RIZA 96.034) aangevuld met de MLC-lijsten die t.b.v. de Kaderrichtlijn Water zijn opgesteld. Voor 2010 is het meetprogramma verder aangepast aan regionale informatiebehoeften.

De volgende kerndoelen kunnen worden gedefinieerd:

- Trends en toestandsbeschrijving van watersystemen zowel chemisch als biologisch;
- Toetsing aan de waterkwaliteitsdoelstellingen (normen) van het nationale beleid;
- Nakomen van nationale en internationale afspraken en verplichtingen inzake het meten van de waterkwaliteit:
 - Europese Kader Richtlijn Water (KRW)
 - Regeling milieukwaliteitseisen gevaarlijke stoffen
 - Internationale Rijn-Commissie
 - Internationale Maas-Commissie
 - Internationale Schelde-Commissie
 - Vereniging van Rivierwaterbedrijven RIWA
 - OSPAR
 - TMAP
 - EURATOM
 - Viswaterrichtlijn
 - Schelpdierwaterrichtlijn
 - Nitraatrichtlijn
 - Waterakkoorden met Waterschappen

De meetverplichtingen zijn in het algemeen 'non-negotiaal'. Met name de KRW is belangrijke regelgeving en waar nodig is in dit document hier extra aandacht aan gegeven. Het niet nakomen van bepaalde meetverplichtingen kan leiden tot veroordeling van Nederland bij het Europese Hof met grote financiële consequenties.

2.3 Belangrijkste wijzigingen t.o.v. meetplan 2009

- In 2009 heeft een optimalisatie plaatsgevonden van zowel het landelijk meetnet als van de regionale meetnetten. Dit heeft geresulteerd in het schrappen van een aantal locaties in deze meetnetten. De resterende regionale locaties zijn met de landelijke toegevoegd aan één uniform Rijkswaterstaatmeetnet. De veranderingen betreffen met name de meetcompartimenten oppervlaktewater, zwevend stof en waterbodem.

2.4 Bemonsterende instanties

De monsternemingen worden in 2010 uitgevoerd door de volgende instanties en bedrijven:

- Rijkswaterstaat Waterdienst
- Rijkswaterstaat Noord-Holland
- Rijkswaterstaat Zuid-Holland
- Rijkswaterstaat IJsselmeergebied
- Rijkswaterstaat Oost-Nederland
- Rijkswaterstaat Limburg
- Rijkswaterstaat Zeeland
- Rijkswaterstaat Noord-Nederland
- Rijkswaterstaat Noordzee
- Waterbedrijf Waternet
- Waterbedrijf Vitens
- Aqualab BV (i.o.v. Waterbedrijf Evides)
- Waterleiding Maatschappij Limburg
- Imares
- SOVON
- Natuurmonumenten
- Grontmij
- AquaSense
- Koeman & Bijkerk
- NIOO
- NIOZ

2.5 Monsternemingen

De bemonsteringen vinden plaats volgens Rijkswaterstaatsvoorschriften (RWSV's) of interne voorschriften. Indien geen gebruik gemaakt wordt van de afgesproken voorschriften worden de afwijkingen hiervan vastgelegd.

2.5.1 Water

- zout: periodiek steekmonsters
- meetvis/pomp/ringleiding-systeem met monsternamevat (oppervlakte)
 - Niskinbottles (diepte)
- zoet: periodiek (equidistant) steekmonsters, Lobith en Eijsden ook 24-uurs-verzamelmonsters
- emmer met/zonder monsternamevat
 - steekbuis met monsternamevat
 - meetvis/pomp/ringleiding-systeem

2.5.2 Zwevend stof

- zout/zoet: periodiek (equidistant) tijdsverzamelmonsters
- doorstroomsupercentrifuge

2.5.3 Waterbodem

- zout: op aantal locaties gecombineerd onderzoek chemisch en macrozoobenthos
- Boxcorer (chemie en macrozoobenthos)
- zoet: op aantal locaties gecombineerd onderzoek chemisch en macrozoobenthos
- Boxcorer (chemie)
 - Ekman Birge happer (chemie)
 - van veenhapper
 - steekbuis
 - werpkorf
 - macrozoobenthos-handnet

2.5.4 Macrozoobenthos

- zoet: op stenen

2.5.5 Mosselen

zoet: actieve biologisch/biochemische monitoring (ABM)

- ABM: uithangen van driehoeksmosselen (in 2010 een doorgaand project, maar is nog in discussie)

zout: actieve en passieve biologisch/biochemische monitoring (ABM en PBM)

- ABM: uithangen van mosselen
- PBM: verzamelen van mosselen (OSPAR-JAMP-CEMP)
- PBM: verzamelen van mosselen (richtlijn schelpdierwater)

2.5.6 Marine slakken

zout: biologisch/biochemische monitoring

- verzamelen van mariene slakken (OSPAR-JAMP-CEMP)

2.5.7 Botten

zout: biologisch/biochemische monitoring

- verzamelen van botten (OSPAR-JAMP-CEMP) met boomkornet

2.5.8 Vogeleieren

zout: biologisch/biochemische monitoring

- verzamelen van eieren van scholekster en visdief (TMAP)

2.6 Analyses

De analyses voor het kwaliteitsonderzoek in oppervlaktewater, zwevend stof en waterbodem worden veelal door de laboratoria van Rijkswaterstaat Waterdienst uitgevoerd of namens deze uitbesteed aan externe (gecertificeerde) laboratoria. De analyses vinden indien relevant plaats volgens geaccrediteerde voorschriften goedgekeurd door de Raad voor Accreditatie (RvA). De analysesmethodieken en prestatiekenmerken zijn opgenomen in het 'Analyseboek Laboratoria, versie monitoring zoete wateren, 1 juni 2009' en het 'Analyseboek Laboratoria, versie monitoring zoute wateren, 1 juni 2009', op aanvraag verkrijgbaar.

De analyses voor het door de Waterdienst rechtstreeks uitbestede onderzoek (o.a. in biota) wordt door de betreffende marktpartijen uitgevoerd, indien relevant volgens geaccrediteerde voorschriften goedgekeurd door de Raad voor Accreditatie (RvA).

Bepaalde analyses op de drinkwaterinname locaties worden door de verantwoordelijke drinkwaterbedrijven uitgevoerd. Deze meetgegevens worden door de RIWA-MAAS en RIWA-RIJN aangeleverd (zie ook Bijlage 5 "Overeenkomst Waterdienst en RIWA uitwisseling waterkwaliteitsgegevens", pag.387).

2.7 Planning, levering, controle en beschikbaarheid meetgegevens

2.7.1 Planning en operationele opslag laboratoriummeetgegevens

De te meten parameters in oppervlaktewater, zwevend stof en waterbodem worden gepland in de laboratoriuminformatiesystemen LABINFOS van de Waterdienst. De resultaten van de laboratoriumanalyses worden opgeslagen in LABINFOS (operationele opslag minimaal 5 jaar).

De planning en operationele opslag (gedurende het meetjaar) van de meetresultaten van de drinkwaterbedrijven en van de rechtstreeks door de Waterdienst ingehuurd partijen vindt in hun eigen database plaats.

2.7.2 Levering veldgegevens

De voorwaarden zijn gespecificeerd in de functionele eisen en projectplannen.

De veldgegevens van oppervlaktewater en zwevend stof (in het veld in-situ of in-loco gemeten) worden door de MID'n per e-mail aangeleverd bij het laboratorium van de Waterdienst Lelystad en ingelezen in LABINFOS. RIZA Voorschrift: "Procedures voor het aanleveren van fysisch-chemische veldparameters, versie 7.0, augustus 2007"¹:

- De meetresultaten van de sensorische veldparameters op digitale wijze, binnen 2 weken na monsterneming, tenzij in de functionele eisen anders vermeld;
- De overige registraties op veldformulier, gelijk met de monsters.

¹ In de loop van 2010 komt een geactualiseerde versie

De (meeste) veldgegevens van de drinkwaterbedrijven en van de rechtstreeks door de Waterdienst ingehuurde partijen worden bij de eindoplevering geleverd aan de Waterdienst.

2.7.3 Controle, definitieve opslag en beschikbaarheid meetgegevens

De resultaten van de veldmetingen en van de laboratoriumanalyses worden lopende het jaar opgeslagen in de centrale database van rijkswaterstaat DONAR onder de volgende opdrachtgevende (ogi) en beherende (bhi) instantiecodes:

- zoet, chemie: ogi RIZAMON_LAN, bhi RIZAIMMCLLSD;
- zoet, biologie: ogi RIZAMON_LAN, bhi RIZAIMMBLLSD;
- zout, chemie: ogi RIKZMON_*, bhi WDZOUTCHEMIE

De gegevens zijn door de aanleverende instanties (meetdiensten, laboratoria) individueel gevalideerd. De chemische gegevens van 2010 worden daarna in het vroege voorjaar van 2011 gecontroleerd op volledigheid en plausibiliteit waarbij gekeken wordt naar de gehele jaarmetreeks. Tot 1 april 2011 zijn de chemische gegevens voorlopig, te beschouwen als ongevalideerd en niet bruikbaar voor rapportages. Na deze data zijn de gegevens toegankelijk voor ieder die toegang heeft tot DONAR. Daarnaast zijn via www.watermarkt.nl of rechtstreeks de volgende internetlocaties te benaderen¹:

- www.waterbase.nl → basisgegevens historie
- www.waterstat.nl → statistische kengetallen (statistiek) historie
- opmerking: in 2009 is besloten om de website www.waterplan.nl (planningsinfo) niet meer te onderhouden.

Tevens zijn meetgegevens (t/m 2008) op te vragen bij de Helpdesk Water:

- www.helpdeskwater.nl
- 0800-NLWATER, 0800-6592837
- contact@helpdeskwater.nl

¹ Deze websites zijn vanaf medio 2009 om veiligheidsredenen niet meer toegankelijk. De verwachting is dat ze in de loop van 2010 weer operationeel zijn. In 2009 is besloten om de website www.waterplan.nl (planningsinfo) niet meer te onderhouden.

2.8 Leeswijzer

De monsternemingen zijn per watersysteem en/of per regio samengevat in onderzoeksgebieden. De planning van een gebied is samengevat in drie overzichten.

- ① Het eerste overzicht (bijv. pag. 7) vermeldt de monsternemingslocaties per gebied, met beknopte informatie over monsterneming, transport en contactpersonen.
- ② Het tweede overzicht (bijv. pag. 7) geeft de data waarop monsternemingen voor dit gebied worden uitgevoerd. Achter elke datum staan de op deze dag van toepassing zijnde meetfrequenties. Deze frequenties corresponderen met die weergegeven in het derde overzicht.

| 4.6 Datum monsterneming Noord-Holland | | | | | |
|---|---|------------|----|-------------------|---------|
| Weeknummers conform ISO 8601 | | | | | |
| Tussen [] : minimaal benodigde hoeveelheid nat centrifugeslib (afgeleid van gemiddeld percentage droge stof laatste 5 jaren) | | | | | |
| UJMDN1 | Frequentie | | | | |
| | Oppervlaktewater (13x) en Zwevend stof centrifuge (13x) | | | | |
| Week 4 | maandag | 2009/01/19 | 13 | | [190 g] |
| Week 8 | maandag | 2009/02/16 | 13 | 6 6 ²⁵ | [190 g] |
| Week 12 | maandag | 2009/03/16 | 13 | | [180 g] |
| Week 16 | dinsdag | 2009/04/14 | 13 | 6 6 ²⁵ | [200 g] |
| Week 20 | maandag | 2009/05/11 | 13 | | [210 g] |
| Week 24 | maandag | 2009/06/08 | 13 | 6 6 ²⁵ | [210 g] |
| Week 28 | maandag | 2009/07/06 | 13 | | [220 g] |
| Week 32 | maandag | 2009/08/03 | 13 | 6 6 ²⁵ | [170 g] |
| Week 36 | maandag | 2009/08/31 | 13 | | [220 g] |
| Week 40 | maandag | 2009/09/28 | 13 | 6 6 ²⁵ | [220 g] |
| Week 44 | maandag | 2009/10/26 | 13 | | [190 g] |
| Week 48 | maandag | 2009/11/23 | 13 | 6 6 ²⁵ | [190 g] |
| Week 52 | maandag | 2009/12/21 | 13 | | [220 g] |

- ③ In het derde overzicht (bijv. pag. 7) zijn de meetfrequenties in een matrix gezet. Het geeft aan op welke locatie en met welke equidistante frequentie monsterneming en analyse voor een parameter dient te worden uitgevoerd.

4.3 Monsterneming

4.3.1 Monsterneming chemie

De monsternemingen van oppervlaktewater en zwevend stof centrifuge worden uitgevoerd door de informatiedienst van RWS Noord-Holland.

4.3.2 Monsterneming biologie:

De uit te voeren meetnetten zijn: fytoplankton, Macrozoobenthos en fyto-benthos.

4.3.2.1 Fytoplankton (onderzoekperiode: 4-wekelijks)

Te onderzoeken waterlichamen: Noordzeekanaal. Deze is opgenomen binnen het chemisch meetnet (zie onder "datum monsterneming" en "meetfrequenties").

4.3.2.2 Macrozoobenthos (onderzoekperiode: 15 september–31 oktober)

In het Noordzeekanaal, en Amsterdam Rijnkanaal wordt in zowel het litoraal en/of profundaal onderzoek uitgevoerd.

Een uitgebreid overzicht van de te onderzoeken lokaties wordt door de meetcoördinator toegestuurd.

De biotoopbemonstering wordt door de meetdienst i.s.m. RWS Waterdienst uitgevoerd.

4.3.2.3 Fyto-benthos (onderzoekperiode: half mei)

Coördinatie vindt plaats door RWS Waterdienst

4.3.2.4 Waterplanten (onderzoekperiode: 15 juni t/m 31 juli)

In het jaar 2009 wordt geen waterplantenkartering uitgevoerd.

4.3.2.5 Ecotoxicologie sedimentbemonstering en oppervlaktewater worden in 2010 niet uitgevoerd.

4.3.2.6 Monsterneming door externe marktpartijen of PGO's

Naast de monsterneming door meetdiensten van RWS, zijn er ook MWTL meetnetten die door externe partijen worden uitgevoerd. RWS Waterdienst geeft daarvoor opdracht. Het meetnet passieve vismonitoring wordt door IMARES uitgevoerd, het meetnet actieve vismonitoring door Natuurbalans/RAVON, de meetnetten Watervogels en Broedvogels worden uitgevoerd danwel gecoördineerd door SOVON Vogelonderzoek Nederland, het meetnet oevervegetatie wordt door FLORON uitgevoerd en de bioaccumulatie meetnetten Aal en Driehoeksmossel worden wederom door IMARES uitgevoerd. In de werkgebieden van de meetdiensten vinden dus bemonsteringen/inventarisaties plaats uit voornoemde meetnetten.

Voor meer informatie kan contact worden opgenomen met RWS Waterdienst, afdeling WGML, cluster monitoring.

4.4 Contactpersonen Informatiedienst Water

Coördinatie chemie: MID IJsselmeergebied, mevr. I. Brongers; lanthe.Brongers@rws.nl; 0320-297910

Coördinatie biologie: MID IJsselmeergebied,

Macrozoobenthos: mevr. J.Postema; jeroen.postema@rws.nl 0320-297328

Fytoplankton: dhr.M. Tjeertes; Michael.Tjeertes@rws.nl; 0320-297184

Monsterneming: A. Oosterveld; Arjan.Oosterveld@rws.nl; 0255-54 56 22, 06-53259096

Monsterneming: K.T. Groenveld; Klaas.Groenveld@rws.nl; 0255-54 55 12

Vestiging algemeen: 0255-54 56 00

Vaarttuig, alleen in noodgevallen bellen: "Kennemer", 06-20138466, fax 06-53351478

4.5 Transport

Het transport van materiaal en monsters vindt plaats conform het transportschema RWS Waterdienst. Het lege monsternemingsmateriaal wordt minimaal 3 weken voor monsterneming afgeleverd. Monsters water worden op de dag van monsterneming opgehaald en uiterlijk de volgende ochtend vroeg in Lelystad (overig) afgeleverd. Monsters centrifuge zwevend stof worden uiterlijk een week na monsterneming opgehaald bij de meetdienst en in Lelystad afgeleverd.

Afleveradres (uitz. Microtox)/ophaaladres alle leeg materiaal en monsters water:

Oost-zijde NS-station Amsterdam CS (Ruiterkade, meetschip tijdelijk afgemeerd)

Ophaaladres monsters centrifuge zwevend stof:

RWS Noord-Holland, Hoofdkantoor, Toekanweg 7, 2035 LC Haarlem (023-5301578)

Bij uitzondering of extra rit:

RWS Noord-Holland, Seinpostweg 36-38, 1976 BT IJmuiden (0255-56 64 66)

Afleveradres monsters water Microtox:

RIVM, Anthonie v. Leeuwenhoeklaan 9 (gebouw 8, begane grond)

Contactpersoon RIVM: W. Verweij; 030-2742609, bgg: 030-2742419

Aflever/ophaaladres meetdienst leeg materiaal/monsters Macrozoobenthos:

RWS Waterdienst, afdeling WGML, cluster inklaring, Zuiderwagenplein 2, Lelystad, 0320-298 638

4.6 Datum monsterneming Noord-Holland

Weeknummers conform ISO 8601

Tussen [] : minimaal benodigde hoeveelheid nat centrifugeslib (afgeleid van gemiddeld percentage droge stof laatste 5 jaren)

Opmerkingen

nf : na filtratie over 0,45 µm (=opgelost)

als Sn: De organotin verbindingen in zoete opp.wateren worden nog steeds als tin gerapporteerd.

NH3 : $\text{NH}_4 / (1 + 10^{(10,08 - 0,033 * T - \text{pH})})$

NO3 : $s_{\text{NO}_3\text{NO}_2} - \text{NO}_2$

N : $\text{KjN} + \text{NO}_3 + \text{NO}_2$

DIN : $\text{NO}_2 + \text{NO}_3 + \text{NH}_4$

DIP : PO_4

SALNTT: berekend uit T en GELDHD conform RWSV 913.00.W008

Westzaan is in deze tabel opgenomen omdat er wel een monster moet worden genomen, maar mogelijk met een sedimentval. De frequentie moet nog bepaald worden, maar dan kan er vast rekening mee gehouden worden

5.3 Monsterneming

5.3.1 Monsterneming chemie

De monsterneming van water, zwevend stof en waterbodem wordt uitgevoerd door de meet- en informatiedienst van RWS IJsselmeergebied.

5.3.2 Monsterneming biologie

De uit te voeren meetnetten zijn: fytoplankton, macrozoobenthos en fyto-benthos, waterplanten, ecotoxicologie

5.3.2.1 Fytoplankton (onderzoekperiode: 4-wekelijks)

Te onderzoeken waterlichamen: IJsselmeer, Markermeer en Randmeren. Deze zijn opgenomen binnen het chemisch meetnet (zie onder "datum monsterneming" en "meetfrequenties").

5.3.2.2 Macrozoobenthos (onderzoekperiode: 15 september t/m 31 oktober)

In de waterlichamen Randmeren, IJsselmeer en het Markermeer zal het litoraal- en/of profundaal milieu worden onderzocht.

Een uitgebreid overzicht van de te onderzoeken lokaties wordt door de meetcoördinator toegestuurd. De biotoopbemonstering wordt door de Meetdienst i.s.m. RWS Waterdienst uitgevoerd.

5.3.2.3 Fytobenthos (onderzoekperiode: half mei)

Coördinatie vindt plaats door RWS Waterdienst

5.3.2.4 Waterplanten (onderzoekperiode: 15 juni t/m 31 juli)

In de Meetinspanningsaanvraag staan de waterlichamen aangegeven welke jaarlijkse worden gekarteerd. Een uitgebreid overzicht van de te onderzoeken lokaties (200 (= 800 PO's) wordt door de meetcoördinator toegestuurd.

5.3.2.5 Ecotoxicologie (onderzoekperiode: sediment: tweede helft oktober)

In de maand oktober zal op locatie WAGPZD, MARKMNOT, door de meet- en informatiedienst een waterbodemonster worden genomen voor de bepaling van bioassays en chemische samenstelling. Er zal in 2010 geen oppervlaktewateronderzoek (microtox) worden uitgevoerd.

5.3.2.6 Monsterneming door externe marktpartijen of PGO's

Naast de monsterneming door meetdiensten van RWS, zijn er ook MWTL meetnetten die door externe partijen worden uitgevoerd. RWS Waterdienst geeft daarvoor opdracht. Het meetnet passieve vismonitoring wordt door IMARES uitgevoerd, het meetnet actieve vismonitoring door Natuurbalans/RAVON, de meetnetten Watervogels en Broedvogels worden uitgevoerd danwel gecoördineerd door SOVON Vogelonderzoek Nederland, het meetnet oevervegetatie wordt door FLORON uitgevoerd en de bioaccumulatie meetnetten Aal en Driehoeksmossel worden wederom door IMARES uitgevoerd. In de werkgebieden van de meetdiensten vinden dus bemonsteringen/inventarisaties plaats uit voornoemde meetnetten. Voor meer informatie kan contact worden opgenomen met RWS Waterdienst, afdeling WGML, cluster monitoring.

5.4 Contactpersonen meet- en informatiedienst

Coördinatie chemie, macrozoobenthos, fytoplankton: mevr. I. Brongers; Ianthe.Brongers@rws.nl; 0320-297910;
Coördinatie waterplanten: M. Tjeertes; Michael.Tjeertes@rws.nl; 0320-297184
Vaarttuig, alleen in noodgevallen bellen: "Zuiderzee", 06-51 51 82 00

5.5 Transport

Het transport van materiaal en monsters vindt plaats conform het transportschema RWS Waterdienst. Het lege monsternemingsmateriaal wordt minimaal een week voor monsterneming door de meet- en informatiedienst in Lelystad opgehaald. Monsters water worden op de dag van monsterneming door de meet- en informatiedienst in Lelystad afgeleverd. Monsters centrifuge zwevend stof en waterbodembodem worden uiterlijk een week na monsterneming door de meet- en informatiedienst in Lelystad afgeleverd. Watermonsters voor Microtox-onderzoek worden uiterlijk de dag na monsterneming voor 13.00 uur bij het RIVM afgeleverd.

De daarvoor in aanmerking komende waterplanten (zie RWSV) worden t.a.v. de meetcoördinator biologische monitoring ingevroren opgestuurd naar RWS Waterdienst te Lelystad.

Aflever/ophaaladres meetdienst leeg materiaal, monsters water, zwevend stof, waterbodembodem, macrozoobenthos:

RWS Waterdienst, afdeling WGML, cluster inkling, Zuiderwagenplein 2, Lelystad, 0320-298 638

Afleveradres ingevroren waterplanten:

RWS Waterdienst, afdeling WGML, cluster monitoring, Zuiderwagenplein 2, Lelystad, t.a.v. A. Naber 0320-298794

6.9 Monsterneming

6.9.1 Monsterneming chemie

De monsterneming van oppervlaktewater en zwevend stof op het meetstation Lobith wordt verzorgd door RWS Waterdienst. De monsterneming van oppervlaktewater en zwevend stof op de overige meetlocaties wordt uitgevoerd door de afdeling Informatie Water (meetdienst) van RWS Oost-Nederland.

6.9.2 Monsterneming biologie

Dit jaar zijn de uit te voeren meetnetten: fytoplankton, Macrozoobenthos en fytoenthos, waterplanten, ecotoxicologie

6.9.2.1 Fytoplankton (onderzoekperiode: 4-wekelijks)

Te onderzoeken waterlichamen: Bovenrijn, IJssel, Zwarte Water, Twentekanaal. Deze zijn opgenomen binnen het chemisch meetnet (zie onder "datum monsterneming" en "meetfrequenties").

6.9.2.2 Macrozoobenthos (onderzoekperiode: 15 september t/m 31 oktober)

In de waterlichamen Maas, Rijn- en Rijnakken, het Twentekanaal en Zwarte Water zal de jaarlijkse biotoopbemonstering in het litoraal- en/of profundaal milieu worden onderzocht. Een uitgebreid overzicht van de te onderzoeken lokaties wordt door de meetcoördinator toegestuurd. De biotoopbemonstering wordt door de Meetdienst Oost-Nederland i.s.m. RWS Waterdienst uitgevoerd.

6.9.2.3 Fytobenthos (onderzoekperiode: half mei)

Coördinatie vindt plaats door RWS Waterdienst

6.9.2.4 Waterplanten (onderzoekperiode: 15 juli t/m 15 september)

In de Meetinspanningsaanvraag staan de waterlichamen aangegeven welke jaarlijkse worden gekarteerd. Een uitgebreid overzicht van de te onderzoeken lokaties (DON + LB) wordt door de meetcoördinator toegestuurd.

6.9.2.5 Ecotoxicologie (onderzoekperiode: sediment: tweede helft oktober; oppervlaktewater: twee maandelijks)

Op de locatie LOBPTN zal tbv oppervlaktewateronderzoek (microtox) 6 keer een watermonster worden genomen.

6.9.2.6 Monsterneming door externe marktpartijen of PGO's

Naast de monsterneming door meetdiensten van RWS, zijn er ook MWTL meetnetten die door externe partijen worden uitgevoerd. RWS Waterdienst geeft daarvoor opdracht. Het meetnet passieve vismonitoring wordt door IMARES uitgevoerd, het meetnet actieve vismonitoring door Natuurbalans/RAVON, de meetnetten Watervogels en Broedvogels worden uitgevoerd danwel gecoördineerd door SOVON Vogelonderzoek Nederland, het meetnet oevervegetatie wordt door FLORON uitgevoerd en de bioaccumulatie meetnetten Aal en Driehoeksmossel worden wederom door IMARES uitgevoerd. In de werkgebieden van de meetdiensten vinden dus bemonsteringen/inventarisaties plaats uit voornoemde meetnetten.

Voor meer informatie kan contact worden opgenomen met RWS Waterdienst, afdeling WGML, cluster monitoring.

6.11 Transport

Het transport van materiaal en monsters vindt plaats conform het transportschema RWS Waterdienst. Het lege monsternemingsmateriaal wordt minimaal 3 weken voor monsterneming afgeleverd. Monsters water worden op de dag van monsterneming opgehaald en uiterlijk de volgende ochtend vroeg in Lelystad afgeleverd. Monsters centrifuge zwevend stof worden uiterlijk een week na monsterneming opgehaald bij het meetstation Lobith of de meetdienst (overige locaties) en in Lelystad afgeleverd. Monsters water voor Microtox-onderzoek worden uiterlijk de dag na monsterneming voor 13.00 uur bij het RIVM afgeleverd. De eendagsverzamelmonsters van Lobith worden wekelijks opgehaald.

De daarvoor in aanmerking komende waterplanten (zie RWSV) worden, t.a.v. de meetcoördinator biologische monitoring, ingevroren opgestuurd naar RWS Waterdienst te Lelystad.

Aflever/ophaaladres alle leeg materiaal, monsters water (excl. Microtox), zwevend stof en macrozoobenthos:

Lobith: RWS Waterdienst, meetponton, Astorestraat (Tuindorp), 6916 ZG Tolkamer
Overig: RWS Oost-Nederland, Slijpbeekweg 8, 6812 DP Arnhem "Rosandepolder", 026-3688960

Afleveradres monsters water Microtox:

RIVM, Anthonie v. Leeuwenhoeklaan 9 (gebouw 8, begane grond)
Contactpersoon RIVM: W. Verweij, tel 030-2742609, bgg: 030-2742419

Afleveradres ingevroren waterplanten:

RWS Waterdienst, afdeling WGML, cluster monitoring, Zuiderwagenplein 2, Lelystad, t.a.v.
A. Naber 0320-298794

7.9 Monsterneming

7.9.1 Monsterneming chemie

Eijsden: de monsterneming van oppervlaktewater en zwevend stof wordt uitgevoerd door de Meetgroep (meetdienst) van RWS Limburg.

Nederweert, Stevensweert en Belfeld: de monsterneming van oppervlaktewater wordt uitgevoerd door de afdeling Informatie Water (meetdienst) van RWS Oost-Nederland.

7.9.2 Monsterneming biologie

Uit te voeren meetnetten: fytoplankton, Macrozoobenthos en fytoenthos, waterplanten, ecotoxicologie

7.9.2.1 Fytoplankton (onderzoekperiode: 4-wekelijks)

Te onderzoeken waterlichamen: Bovenmaas, Zandmaas, Zuid Willemsvaart. Deze zijn opgenomen binnen het chemisch meetnet (zie onder "datum monsterneming" en "meetfrequenties").

7.9.2.2 Macrozoobenthos (onderzoekperiode: 15 september t/m 31 oktober)

In hierna genoemde waterlichamen zal de uitvoering worden verzorgd worden door MID Oost Nederland: Bovenmaas, Grensmaas, Zandmaas, Bedijkte Maas, Beneden Maas, Bergse Maas (zie onder 6, "Onderzoek Oost Nederland").

Een uitgebreid overzicht van de te onderzoeken lokaties wordt door de meetcoördinator toegestuurd. De biotoopbemonstering wordt door de Meetdienst i.s.m. RWS Waterdienst uitgevoerd.

7.9.2.3 Fytobenthos (onderzoekperiode: half mei)

Coördinatie vindt plaats door RWS Waterdienst

7.9.2.4 Waterplanten (onderzoekperiode: 15 juli t/m 15 september)

In de Meetinspanningsaanvraag staan de waterlichamen aangegeven welke jaarlijks worden gekarteerd. (zie onder 6, Onderzoek Oost Nederland).

Een uitgebreid overzicht van de te onderzoeken lokaties wordt door de meetcoördinator toegestuurd.

7.9.2.5 Ecotoxicologie (oppervlaktewater: twee maandelijks)

Op de locatie EIJSPTN zal tbv oppervlaktewateronderzoek (microtox) 6 keer een watermonster worden genomen. In de maand oktober zal op locatie BORGHRBVN een waterbodemmonster worden genomen voor de bepaling van bioassays en chemische samenstelling.

7.9.2.6 Monsterneming door externe marktpartijen of PGO's

Naast de monsterneming door meetdiensten van RWS, zijn er ook MWTL meetnetten die door externe partijen worden uitgevoerd. RWS Waterdienst geeft daarvoor opdracht. Het meetnet passieve vismonitoring wordt door IMARES uitgevoerd, het meetnet actieve vismonitoring door Natuurbalans/RAVON, de meetnetten Watervogels en Broedvogels worden uitgevoerd danwel gecoördineerd door SOVON Vogelonderzoek Nederland, het meetnet oevervegetatie wordt door FLORON uitgevoerd en de bioaccumulatie meetnetten Aal en Driehoeksmossel worden wederom door IMARES uitgevoerd. In de werkgebieden van de meetdiensten vinden dus bemonsteringen/inventarisaties plaats uit voornoemde meetnetten.

Voor meer informatie kan contact worden opgenomen met RWS Waterdienst, afdeling WGML, cluster monitoring.

7.11 Transport

Het transport van materiaal en monsters vindt plaats conform het transportschema RWS Waterdienst. Het lege monsternemingsmateriaal wordt minimaal 3 weken voor monsterneming afgeleverd. Monsters water worden op de dag van monsterneming opgehaald en uiterlijk de volgende ochtend vroeg in Lelystad afgeleverd. Monsters centrifuge zwevend stof worden uiterlijk een week na monsterneming opgehaald bij de monsternemende instantie en in Lelystad afgeleverd. Monsters water voor Microtox-onderzoek worden uiterlijk de dag na monsterneming voor 13.00 uur bij het RIVM afgeleverd. De eendagsverzamelmonsters van Eijsden worden wekelijks opgehaald.

De daarvoor in aanmerking komende waterplanten (zie RWSV) worden, t.a.v. de meetcoördinator biologische monitoring, ingevroren opgestuurd naar RWS Waterdienst te Lelystad.

Oppervlaktewater (excl. Microtox) en zwevend stof Eijsden:

Aflever/ophaaladres alle leeg monstermateriaal en monsters:

Eijsden: RWS Limburg meetpunt, Trichterweg, 6245 ZG Eijsden

Oppervlaktewater Stevensweert, Nederweert, Belfeld:

Aflever/ophaaladres alle leeg monstermateriaal en monsters:

RWS Oost-Nederland, Slijpbeekweg 8, 6812 DP Arnhem "Rosandepolder",
contactpersoon 026-3688960

Ingevroren waterplanten

Afleveradres monsters:

RWS Waterdienst, afdeling WGML, cluster monitoring, Zuiderwagenplein 2, Lelystad,
t.a.v. A. Naber 0320-298794

Microtox

Afleveradres monsters water:

RIVM, Anthonie v. Leeuwenhoeklaan 9 (gebouw 8, begane grond)

Contactpersoon RIVM: W. Verweij, tel 030-2742609, bgg: 030-2742419

Macrozoobenthos

Aflever/ophaaladres alle leeg materiaal en monsters:

RWS Oost-Nederland, Slijpbeekweg 8, 6812 DP Arnhem "Rosandepolder",
contactpersoon 026-3688960

Opmerkingen

nf : na filtratie over 0,45 µm (=opgelost)

als Sn: De organotin verbindingen in zoete opp.wateren worden nog steeds als tin gerapporteerd.

24uurs : verzamelmonster tijdproportioneel gedurende 24 uur, bem.code DONAR : VTIID24H

NH3 : $NH_4 / (1+10^{(10,08-0,033 \cdot T - pH)})$

NO3 : s_NO3NO2 - NO2

N : KjN+NO3+NO2

DIN : NO2+NO3+NH4

DIP : PO4

SALNTT: berekend uit T en GELDHD conform RWSV 913.00.W008

8.9 Monsterneming

8.9.1 Monsterneming chemie

De monsterneming van oppervlaktewater en zwevend stof wordt uitgevoerd door de meetdienst van RWS Zuid-Holland.

8.9.2 Monsterneming biologie

Uit te voeren meetnetten: fytoplankton, Macrozoobenthos en fyto-benthos, waterplanten, ecotoxicologie

8.9.2.1 Fytoplankton (onderzoekperiode: 4-wekelijks)

Te onderzoeken waterlichamen: Nieuwe Waterweg, Haringvliet West, Nieuwe Maas, Hollandsche IJssel, Oude Maas, Hollandsch Diep, Bergsche Maas. Deze zijn opgenomen binnen het chemisch meetnet (zie onder "datum monsterneming" en "meetfrequenties").

8.9.2.2 Macrozoobenthos (onderzoekperiode: 15 september t/m 31 oktober)

In de waterlichamen van de Rijn en Rijn-takken (Getijde-Lek, Lek, Oude Maas, Waal, Nw. Merwede, Dortsche Biesbosch, Hollandse IJssel, Nw. Maas, Nw. Waterweg en iBergsche Maas) zal de biotoopbemonstering in het litoraal- en/of profundaal milieu worden onderzocht.

Van de Zoete Delta (Brabantse Biesbosch, Haringvliet-Oost, Hollandsch Diep, Haringvliet West) zal de biotoopbemonstering in het litoraal- en/of profundaal milieu worden onderzocht.

Een uitgebreid overzicht van de te onderzoeken lokaties wordt door de meetcoördinator toegestuurd.

De biotoopbemonstering wordt door de Meetdienst i.s.m. RWS Waterdienst uitgevoerd.

8.9.2.3 Fytobenthos (onderzoekperiode: half mei)

Coördinatie vindt plaats door RWS Waterdienst

8.9.2.4 Waterplanten (onderzoekperiode: 15 juli t/m 15 september)

In de Meetinspanningsaanvraag staan de waterlichamen aangegeven welke gekarteerd dienen te worden.

Een uitgebreid overzicht van de te onderzoeken lokaties wordt door de meetcoördinator toegestuurd.

8.9.2.5 Ecotoxicologie (onderzoekperiode: sediment: tweede helft oktober: n.v.t. Oppervlaktewater: twee maandelijks: n.v.t.)

8.9.2.6 Monsterneming door externe marktpartijen of PGO's

Naast de monsterneming door meetdiensten van RWS, zijn er ook MWTL meetnetten die door externe partijen worden uitgevoerd. RWS Waterdienst geeft daarvoor opdracht. Het meetnet passieve vismonitoring wordt door IMARES uitgevoerd, het meetnet actieve vismonitoring door Natuurbalans/RAVON, de meetnetten Watervogels en Broedvogels worden uitgevoerd of gecoördineerd door SOVON Vogelonderzoek Nederland, het meetnet oevervegetatie wordt door FLORON uitgevoerd en de bioaccumulatie meetnetten Aal en Driehoeksmossel worden wederom door IMARES uitgevoerd. In de werkgebieden van de meetdiensten vinden dus bemonsteringen/inventarisaties plaats uit voornoemde meetnetten.

Voor meer informatie kan contact worden opgenomen met RWS Waterdienst, afdeling WGML, cluster monitoring.

8.10 Contactpersonen Meetdienst

Meetcoörd. chemie: G. Voogt; Gerard.Voogt@rws.nl; 010-402 67 72; fax 010-402 68 80

Meetcoörd. Macrozoobenthos, waterplanten: A. Schipperen; ad.schipperen@rws.nl, 010 - 402 6761

Logistiek en uitvoeringstechnisch: J.A.J. Tempelaars; Joop.Tempelaars@rws.nl; 010-4026792, 06-27073492

8.11 Transport

Het transport van materiaal en monsters vindt plaats conform het transportschema RWS Waterdienst. Het lege monsternemingsmateriaal wordt minimaal 3 weken voor monsterneming afgeleverd. Monsters water worden op de dag van monsterneming opgehaald en uiterlijk de volgende ochtend vroeg in Lelystad afgeleverd. Monsters centrifuge zwevend stof en waterbodembodem worden uiterlijk een week na monsterneming opgehaald bij de meetdienst en in Lelystad afgeleverd. Monsters water voor Microtox-onderzoek worden uiterlijk de dag na monsterneming voor 13.00 uur bij het RIVM afgeleverd. De daarvoor in aanmerking komende waterplanten (zie RWSV) worden t.a.v. de meetcoördinator biologische monitoring ingevroren opgestuurd naar RWS Waterdienst te Lelystad.

Afleveradres leegmateriaal:

RWS Zuid-Holland, Van Leeuwenhoekweg 20, 3316 AV Dordrecht

Ophaaladres monsters water (uitz. Microtox), zwevend stof, Macrozoobenthos

Is afhankelijk van de monsternemingsdatum en -locatie, zie transportschema:

of: RWS Zuid-Holland Meet en informatiedienst (ARI), Van Leeuwenhoekweg 20, 3316 AV

Dordrecht

of: Wartlasstraat 3 3087 AG Rotterdam (Havennummer 2136), 010-402 67 94

Afleveradres monsters water Microtox:

RIVM, Anthonie v. Leeuwenhoeklaan 9 (gebouw 8, begane grond)

Contactpersoon RIVM: W. Verweij, tel 030-2742609, bgg: 030-2742419

Afleveradres ingevroren waterplanten:

RWS Waterdienst, afdeling WGML, cluster monitoring, Zuiderwagenplein 2, Lelystad,
t.a.v. A. Naber, 0320-298794

9.9 Monsterneming

9.9.1 Monsterneming chemie

De monsterneming van oppervlaktewater en zwevend stof wordt uitgevoerd door de meetinformatiedienst van RWS Zeeland.

9.9.2 Monsterneming biologie

Uit te voeren meetnetten: fytoplankton, Macrozoobenthos en fyto-benthos, waterplanten, ecotoxicologie

9.9.2.1 Fytoplankton (onderzoekperiode: 4-wekelijks)

Te onderzoeken waterlichamen: Volkerak, Kanaal Gent-Terneuzen en Westerschelde. Deze zijn opgenomen binnen het chemisch meetnet (zie onder "datum monsterneming" en "meetfrequenties").

9.9.2.2 Macrozoobenthos (onderzoekperiode: 15 september t/m 31 oktober)

In de waterlichamen Volkerak en Zoommeer / Eendracht en Kanaal Gent – Terneuzen zal de biotoopbemonstering in het litoraal- en/of profundaal milieu worden uitgevoerd.

Een uitgebreid overzicht van de te onderzoeken lokaties wordt door de meetcoördinator toegestuurd. De biotoopbemonstering wordt door de Meetdienst i.s.m. RWS Waterdienst uitgevoerd.

9.9.2.3 Fytobenthos (onderzoekperiode: half mei)

Coördinatie vindt plaats door RWS Waterdienst

9.9.2.4 Waterplanten (onderzoekperiode: 15 juni t/m 31 juli)

In de Meetinspanningsaanvraag staan de waterlichamen aangegeven welke gekarteerd dienen te worden. Een uitgebreid overzicht van de te onderzoeken lokaties (200) wordt door de meetcoördinator toegestuurd.

9.9.2.5 Ecotoxicologie (onderzoekperiode: sediment: tweede helft oktober: n.v.t.; oppervlaktewater: twee maandelijks: n.v.t.)

9.9.2.6 Monsterneming door externe marktpartijen of PGO's

Naast de monsterneming door meetdiensten van RWS, zijn er ook MWTL meetnetten die door externe partijen worden uitgevoerd. RWS Waterdienst geeft daarvoor opdracht. Het meetnet passieve vismonitoring wordt door IMARES uitgevoerd, het meetnet actieve vismonitoring door Natuurbalans/RAVON, de meetnetten Watervogels en Broedvogels worden uitgevoerd danwel gecoördineerd door SOVON Vogelonderzoek Nederland, het meetnet oevervegetatie wordt door FLORON uitgevoerd en de bioaccumulatie meetnetten Aal en Driehoeksmossel worden wederom door IMARES uitgevoerd. In de werkgebieden van de meetdiensten vinden dus bemonsteringen/inventarisaties plaats uit voornoemde meetnetten.

Voor meer informatie kan contact worden opgenomen met RWS Waterdienst, afdeling WGML, cluster monitoring.

9.10 Contactpersonen meetinformatiedienst

Klantenmanager: mw. J. Willemse-Leunis; Jeanette.Willemse@rws.nl; 0118-622 378

Planning inhoudelijk: E. Paree; Edwin.Paree@rws.nl; 0118-622 243

Planning operationeel: Johan van der Doe; Johan.vander.Doe@rws.nl; 0118-622 247/06-22516548

9.11 Transport

Het transport van materiaal en monsters vindt plaats conform het transportschema RWS Waterdienst. Het lege monsternemingsmateriaal wordt minimaal 3 weken voor monsterneming afgeleverd. Monsters water worden op de dag van monsterneming opgehaald en uiterlijk de volgende ochtend vroeg in Lelystad afgeleverd. Monsters centrifuge zwevend stof en waterbodembodem worden uiterlijk een week na monsterneming opgehaald bij de meetdienst en in Lelystad afgeleverd. De monsters van Schaar van Ouden Doel worden in een aantal uitzonderingsgevallen de dag ná monsterneming opgehaald, zie daarvoor het transportschema RWS Waterdienst.

De daarvoor in aanmerking komende waterplanten (zie RWSV) worden, t.a.v. de meetcoördinator biologische monitoring, ingevroren opgestuurd naar RWS Waterdienst te Lelystad.

Watermonsters voor Microtox-onderzoek worden uiterlijk de dag na monsterneming voor 13.00 uur bij het RIVM afgeleverd.

Aflever/ophaaladres alle leeg materiaal, monsters water, zwevend stof en waterbodembodem:

ANWB Hoofd steunpunt, Vierwegen 3, 4421 RA Kapelle

Afleveradres ingevroren waterplanten:

RWS Waterdienst, afdeling WGML, cluster monitoring, Zuiderwagenplein 2, Lelystad, t.a.v. A. Naber 0320-298794

Afleveradres monsters water Microtox:

RIVM, Anthonie v. Leeuwenhoeklaan 9 (gebouw 8, begane grond)

Contactpersoon RIVM: W. Verweij, tel 030-2742609, bgg: 030-2742419

10.9 Monsterneming

10.9.1 Monsterneming en analyse chemie

De monsterneming op deze drinkwaterinname locaties wordt in het kader van de KRW uitgevoerd. De locaties Nieuwegein en Keizersveer zijn daarbij landelijke MWTL-locaties. De oppervlaktewater-monsterneming en -analyse wordt in een samenwerkingsverband van RWS Waterdienst met de Vereniging van Rivierwaterbedrijven - RIWA-Maas en RIWA-Rijn - uitgevoerd.

De monsterneming van zwevend stof centrifuge bij Nieuwegein en Keizersveer wordt verzorgd door RWS Oost-Nederland respectievelijk Waterbedrijf Evides. De chemische analyse van het zwevend stof wordt door RWS Waterdienst uitgevoerd.

10.9.2 Monsterneming biologie

Uit te voeren meetnetten: fytoplankton, macrozoobenthos en fyto-benthos.

10.9.2.1 Fytoplankton (onderzoekperiode: 4-wekelijks)

Te onderzoeken waterlichamen: Bergsche Maas, (locatie Keizersveer), Lekkanaal (locatie Nieuwegein).

Deze zijn opgenomen binnen het chemisch meetnet (zie onder "datum monsterneming" en "meetfrequenties").

10.9.2.2 Macrozoobenthos (onderzoekperiode: 15 september t/m 31 oktober)

In het waterlichaam Bergse Maas zal de uitvoering verzorgd worden door MID Zuid Holland.

10.9.2.3 Fyto-benthos (onderzoekperiode: half mei)

Coördinatie vindt plaats door RWS Waterdienst

10.9.2.4 Ecotoxicologie onderzoekperiode: sediment: tweede helft oktober: n.v.t.

oppervlaktewater: twee maandelijks: n.v.t.

R. Schuitemaker; R.Schuitemaker@evides.nl; 010-2936967

Heel

Waterleiding Maatschappij Limburg (WML), locatie Water Productiebedrijf Heel bij Beegden (WPH)

P.J.J. Engels; P.Engels@wml.nl; 0475-386511, 06-54913570

10.11 Transport

Het transport van materiaal en monsters vindt plaats conform het transportschema RWS Waterdienst. Het lege monsternemingsmateriaal wordt minimaal 3 weken voor monsterneming afgeleverd. Monsters water worden op de dag van monsterneming opgehaald en uiterlijk de volgende ochtend vroeg in Lelystad afgeleverd. Monsters centrifuge zwevend stof worden uiterlijk een week na monsterneming opgehaald en in Lelystad afgeleverd.

Keizersveer, Scheelhoek oppervlaktewater en zwevend stof

Aflever/ophaaladres alle leeg monstermateriaal en monsters:

Evides (tevens locatie Aqualab), Petrusplaat 1, 4251 NN Werkendam, contactpersoon zie boven

Nieuwegein oppervlaktewater

Aflever/ophaaladres alle leeg monstermateriaal en monsters:

HWL, Het Waterlaboratorium, Groenendaal 6, 3439 LV Nieuwegein, contactpersoon zie boven

Nieuwersluis, Andijk, Brakel, oppervlaktewater

Aflever/ophaaladres alle leeg monstermateriaal en monsters:

Het Waterlaboratorium (HWL), J.W. Lucasweg 2, 2031 BE Haarlem, contactpersoon zie boven

Heel, oppervlaktewater

Aflever/ophaaladres alle leeg monstermateriaal en monsters:

Waterleiding Maatschappij Limburg (WML), locatie Water Productiebedrijf Heel (WPH)
Baexemerweg 3, 6099 NA Beegden, contactpersoon zie boven

10.12 Datum monsterneming drinkwaterinname locaties

Weeknummers conform ISO 8601

Tussen [] : minimaal benodigde hoeveelheid nat centrifugeslib (afgeleid van gemiddeld percentage droge stof laatste 5 jaren)

Zoute rijkswateren
zee, kust- en overgangswateren en grote zoute meren

Water, Wegen, Werken, Rijkswaterstaat

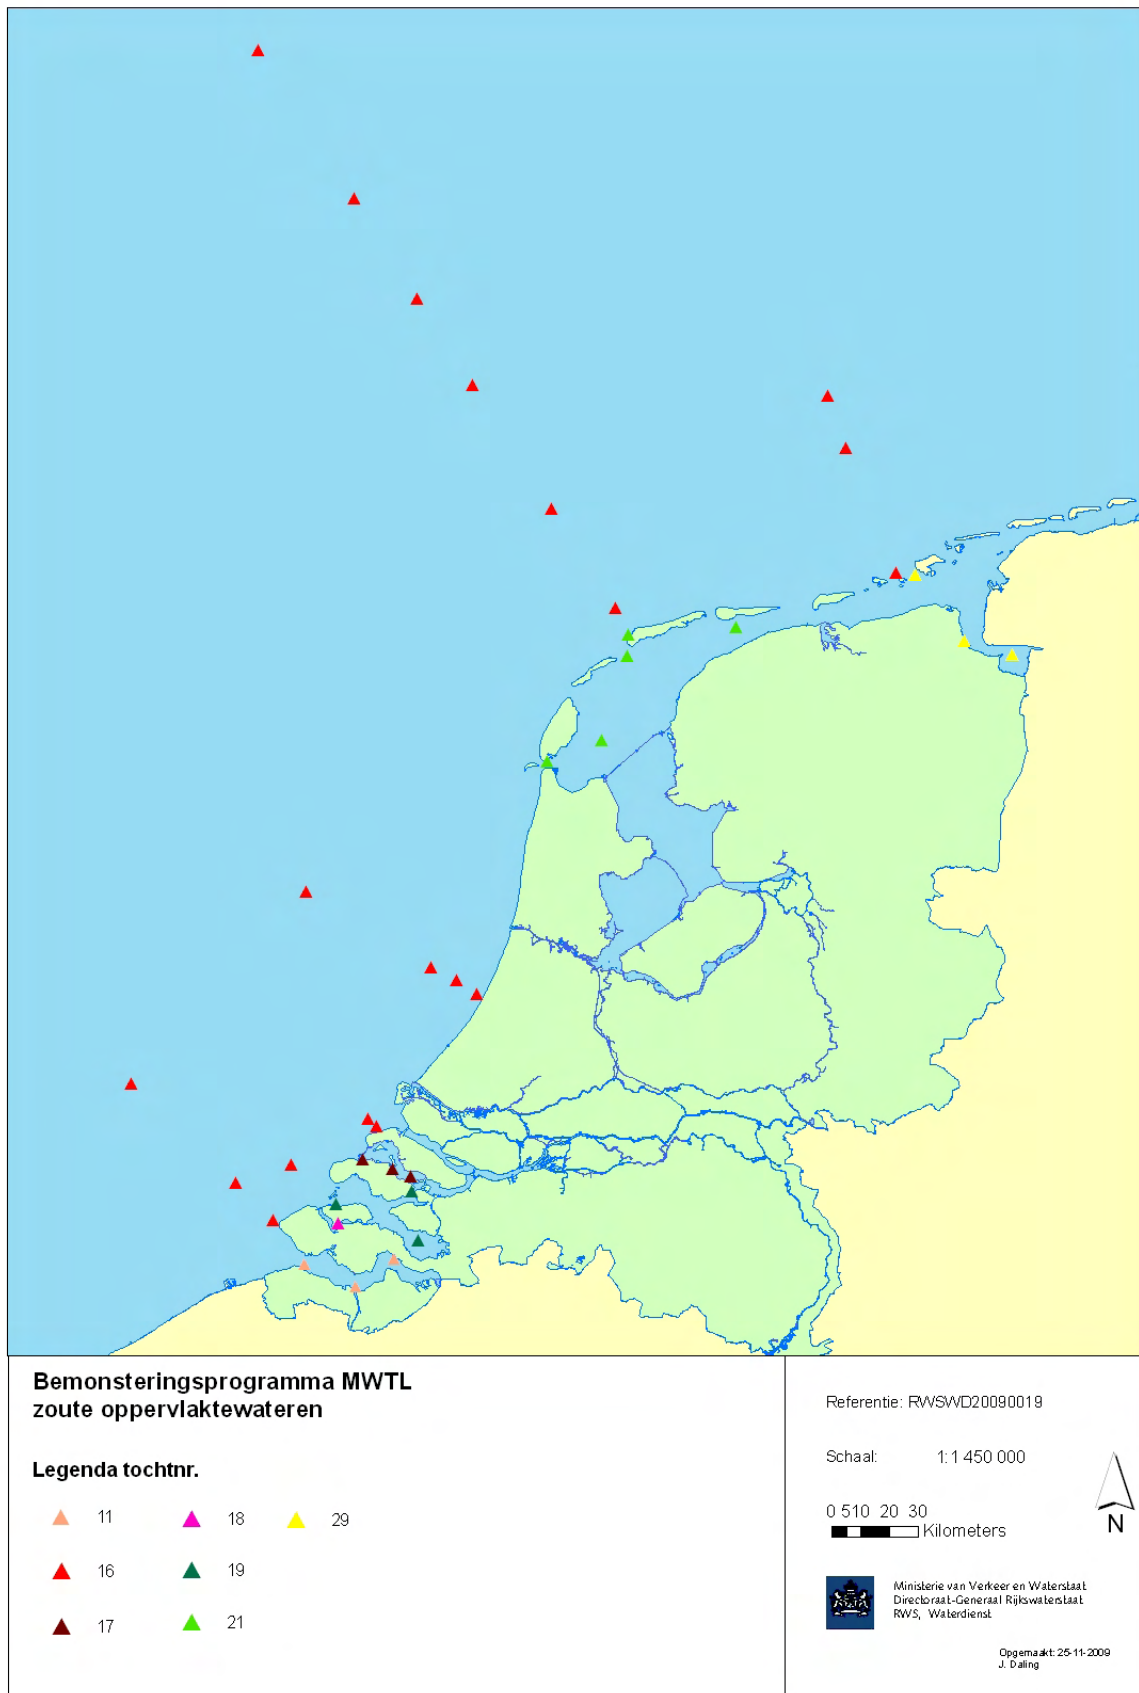

INHOUDSOPGAVE ZOUTE RIJKSWATEREN

Zee, kust- en overgangswateren en grote zoute meren

| Hoofdstuk | Pag |
|---|------------|
| 11 OVERZICHT ZOUTE RIJKSWATEREN | 173 |
| Landsdekkend | |
| 12 Onderzoek bot..... | 181 |
| 13 Onderzoek schelpdierwater-kwaliteit mosselen..... | 185 |
| 14 Onderzoek mariene slak (alikuik) | 189 |
| Zeeuwse Delta | |
| 15 Onderzoek Delta, sediment, chemisch meetnet | 193 |
| 16 Onderzoek Delta, macrozoobenthos en sediment, biologisch meetnet | 199 |
| Westerschelde | |
| 17 Onderzoek Westerschelde, oppervlaktewater en centrifugemonster, tochnr.: 11..... | 203 |
| 18 Onderzoek Westerschelde, mossel, ABM | 217 |
| 19 Onderzoek westerschelde, mossel, PBM | 223 |
| 20 Onderzoek Westerschelde, hoogwater vogeltellingen..... | 227 |
| Grevelingenmeer | |
| 21 Onderzoek Grevelingenmeer, oppervlaktewater, tochnr. 17..... | 229 |
| 22 Onderzoek Grevelingenmeer, mossel, ABM | 239 |
| 23 Onderzoek Grevelingenmeer, vogeltellingen..... | 243 |
| Veerse Meer | |
| 24 Onderzoek Veerse Meer, oppervlaktewater, tochnr.18..... | 245 |
| 25 Onderzoek Veerse Meer, vogeltellingen | 253 |
| Oosterschelde | |
| 26 Onderzoek Oosterschelde, oppervlaktewater, tochnr. 19 | 255 |
| 27 Onderzoek Oosterschelde, mossel, ABM | 265 |
| 28 Onderzoek Oosterschelde, hoogwater vogeltellingen | 269 |
| Noordzee | |
| 29 Onderzoek Noordzee, oppervlaktewater en zwevend stof, tochnr.16..... | 271 |
| 30 Onderzoek Noordzee, mossel, ABM..... | 300 |
| 31 Onderzoek Noordzee, macrozoöbenthos en sediment, biologisch meetnet..... | 304 |
| 32 Onderzoek Noordzee, Voordelta, vogeltellingen..... | 306 |
| Waddenzee / Eems-Dollard | |
| 33 Onderzoek Waddenzee, oppervlaktewater en zwevend stof, tochnr. 21 | 308 |
| 34 Onderzoek Waddenzee, mossel, ABM | 322 |
| 35 Onderzoek Eems-Dollard, oppervlaktewater en zwevend stof, tochnr. 29 | 326 |
| 36 Onderzoek Eems-Dollard, mossel, PBM | 338 |
| 37 Onderzoek Waddenzee & Eems-Dollard, macrozoobenthos + sediment..... | 342 |
| 38 Onderzoek Waddenzee & Eems-Dollard vogeleieren. | 345 |

12.3 Monsterneming en analyse

Het onderzoek vindt plaats in de periode augustus/september.

De monsterneming en analyse zal worden uitbesteed aan Wageningen IMARES.

Voor het chemisch onderzoek worden per locatie 5 lengteklassen vissen bemonsterd waarvan per klasse 5 submonsters worden geanalyseerd. Per locatie gaat het aldus om 25 chemische analyses. De chemische analyses vinden plaats in spierweefsel en leverweefsel. Aanvullend voert de Waterdienst de analyse in galvloeistof uit.

Voor het visziektenonderzoek worden per locatie drie vistrekken uitgevoerd met maximaal 250 vissen per trek.

12.4 Contactpersonen IMARES

12.4.3 Visziekten: bepaling selectieve aandoeningen

Lymphocystis (wratziekte);
 Open huidzweren;
 Skeletafwijkingen;
 Glugea (darmcysten);
 Leverknobbels groter dan 2 mm;
 Andere incidentele aandoeningen (bijvoorbeeld gezwelvorming).

12.4.4 Visziekten: bepaling biologische karakterisering

Lengte
 Geslacht
 Rijpheidstadium
 gewicht:
 - subsample 25 mannetjes en 25 vrouwtjes, gestript, 20,0-24,9 cm
 - indien tekort min. 50 individuele vissen
 conditiefactor:
 - subsample 20,0-24,9 cm
 - beide geslachten afzonderlijk.
 lengte/geslachtsamenstelling
 lengte/leeftijd sleutel
 visdichtheid per vis-uur
 leeftijdsbepaling:
 - bepaald in een sub-sample

Figuur 11. Bemonsteringsprogramma Schelpdierwater

13 Onderzoek schelpdierwater-kwaliteit mosselen

Onderzoek naar chemische en microbiologische contaminanten in mosselen '*Mytilus edulis*' inzake de Schelpdierwaterrichtlijn 2006/113/EG. Nadere informatie is beschreven in het 'Projectplan schelpdierwater-onderzoek 2010' (info M. van der Weijden).

13.1 Werkgebied

Zeeuwse Delta, Waddenzee en de Voordelta.

13.3 Monsterneming en analyse

Het onderzoek vindt plaats in december.

De monsterneming en analyse zal worden uitbesteed aan Wageningen IMARES: coördinatie monsterneming en microbiologische analyse vanuit locatie Yerseke, coördinatie chemische analyse vanuit locatie IJmuiden.

Per locatie worden 5 submonsters verzameld. Bij afwezigheid hiervan is de kokkel, '*Cerastoderma edule*', een alternatief. Microbiologische vindt plaats per submonster. Chemische analyses vindt plaats per uit 5 submonsters samengesteld monster.

De uitvoering van het project geschiedt in 2 fasen.

- Standaardonderzoek: in december, analyses zoals beschreven in onderstaande tabel.
- Uitbreidingsonderzoek: bij overschrijding van de norm voor FECLCLFMN (mediaan 3/ml) extra metingen microbiologie, zintuiglijk en oppervlaktewater.

Figuur 12. Bemonsteringsprogramma mariene slak (alijkruik) intersexindex

14 Onderzoek mariene slak (alijkruik)

Onderzoek naar intersex (afwijking in de vrouwelijke genitaliën) en chemische contaminanten in mariene slakken inzake OSPAR-CEMP-JAMP. Nadere informatie is beschreven in het 'Projectplan JAMP mariene slak 2010' (info M. van der Weijden).

14.1 Werkgebied

Eems-Dollard, Waddenzee west, de Hollandse kust, de Oosterschelde en de Westerschelde.

14.2 Meetlocaties

| Westerschelde west, Borssele (koelwater) uitlaat EPZ kerncentrale (Vlissingen de Kaloot westzijde Borsselecentrale) | BORSSLULEPZK | 38.350.00 | 383.800.00 |

14.3 Monsterneming en analyse

Het onderzoek zal zich in eerste instantie richten op de alijkruik '*Littorina littorea*', maar er kan naar aanleiding van een nog lopende evaluatie een andere indicatorsoort worden gekozen. Het onderzoek vindt plaats in de periode 1 juni tot en met 15 juli. De monsterneming en analyse zal worden uitbesteed aan Wageningen IMARES: coördinatie monsterneming en microbiologische analyse vanuit locatie Yerseke, coördinatie chemische analyse vanuit locatie IJmuiden.

Per locatie zullen 40 slakken worden verzameld. Deze worden onderzocht op het voorkomen van intersex waarna per locatie een intersexindex wordt bepaald. Per locatie Van willekeurig 10 exemplaren wordt een homogeen samengesteld monster gemaakt en geanalyseerd op chemische contaminanten.

16.3 Monsterneming

De bemonstering wordt uitgevoerd door NIOO-CEME met schepen en apparatuur van RWS Zeeland. Tevens stelt RWS Zeeland, een nader aantal te bepalen dagen, personeel ter beschikking voor begeleiding van herkenning van ecotooptypen t.b.v. het macrozoobenthosmeetnet Os en WS.

M.b.t. de bemonstering met de flushing sampler worden boot en flushing sampler door NIOO geleverd. Analyse macrozoobenthos is uitbesteed aan NIOO-CEME. Sedimentanalyse wordt uitgevoerd door Rijkswaterstaat Waterdienst.

Een overzicht met de te onderzoeken locaties per waterlichaam wordt door de projectleider van de Waterdienst toegestuurd.

16.4 Datum monsterneming

Macrozoobenthos voorjaarscampagne: 15 mrt./15 mei 2008, (Grevelingenmeer en Veerse Meer)

Macrozoobenthos najaarscampagne: 15 aug./15 okt 2008, (Grevelingenmeer, Veerse Meer, Oosterschelde en Westerschelde)

Sedimentbemonstering: iedere **najaars**campagne, Grevelingenmeer: alle locaties, Veerse Meer: alle locaties, Westerschelde 50% v/d locaties, Oosterschelde: 50% v/d locaties.

17.3 Monsterneming en transport

De monsterneming wordt uitgevoerd door de meetinformatiedienst van Rijkswaterstaat Zeeland.

17.3.1 Monsternemingsdiepte

- Oppervlaktewater: 1 meter onder de waterspiegel;
- Zwevend stof: 1½ meter onder de waterspiegel.

17.3.2 Start monsterneming

- De monsterneming *oppervlaktewater* te VLISSGBISSVH dient te starten één uur voor hoogwater ter plaatse;
- De monsterneming *zwevend stof* te VLISSGBISSVH dient te starten 3 uur voor laagwater en te eindigen op laagwater ter plaatse;
- ISC-HMS: met de Internationale Scheldec commissie (ISC) heeft Nederland de afspraak gemaakt om voor het Homogeen Meetnet Schelde (meetfrequentie vierwekelijks) de planning voor VLISSGBISSVH, TERNZBI20 en HANSWGL tussen 1 dag vóór en ná de dinsdag vast te leggen, bij voorkeur vóór 12:00 uur.

17.4 Contactpersonen meetinformatiedienst

RWS Waterdienst, cluster monitoring, zie organisatieschema blz 389.

| Hansweert boei OHMG | HANSWBIOHMG | 57.906.00 | 384.367.00 |

18.3 Monsterneming

Per meetlocatie zijn 2 x 50 stuks levende en verwaterde mosselen nodig voor analyses. Er worden door de meetinformatiedienst van Rijkswaterstaat Zeeland (op een nader te bepalen locatie) mosselen '*Mytilus edulis*' verzameld en naar de locatie Jacobahaven in Zeeland gebracht. Daar worden de mosselen voorbereid door de Waterdienst en uitgehangen om te verwateren. Vervolgens worden de mosselen op de meetlocaties door de meetinformatiedienst uitgehangen en na 6 weken weer opgehaald.

Parallel aan het onderzoek worden siliconensheets (kunstmatig sorptiemedium) bij de uitgehangen mosselen geplaatst, voor de zgn. Solid Phase Passive Sampling (SPS). Zie werkvoorschrift.

Figuur 18. Bemonsteringsprogramma Mosselmeetnet. ABM Grevelingenmeer.

22 Onderzoek Grevelingenmeer, mossel, ABM

Actieve biologische monitoring voor het chemisch meetnet MWTL: onderzoek naar cummulatie van chemische contaminanten in uitgehangen mosselen en siliconensheets.

22.1 Werkgebied

Grevelingenmeer

22.2 Monsterneming

Per meetlocatie zijn 2 x 50 stuks levende en verwaterde mosselen nodig voor analyses. Er worden door de meetinformatiedienst van Rijkswaterstaat Zeeland (op een nader te bepalen locatie) mosselen '*Mytilus edulis*' verzameld en naar de locatie Jacobahaven in Zeeland gebracht. Daar worden de mosselen voorbereid door de Waterdienst en uitgehangen om te verwateren. Vervolgens worden de mosselen op de meetlocaties door de meetinformatiedienst uitgehangen en na 6 weken weer opgehaald.

Parallel aan het onderzoek worden siliconensheets (kunstmatig sorptiemedium) bij de uitgehangen mosselen geplaatst, voor de zgn. Solid Phase Passive Sampling (SPS).

22.3 Contactpersonen

RWS Waterdienst, cluster monitoring, zie organisatieschema blz 389.

Figuur 21. Bemonsteringsprogramma Mosselmeetnet: ABM Oosterschelde

27 Onderzoek Oosterschelde, mossel, ABM

Actieve biologische monitoring voor het chemisch meetnet MWTL: onderzoek naar cummulatie van chemische contaminanten in uitgehangen mosselen en siliconensheets.

27.1 Werkgebied

Oosterschelde

27.2 Meetlocaties

| Lokatieomschrijving | DONAR-code | RD ^x [cm] | RD ^y [cm] |
|---------------------|------------|----------------------|----------------------|
| Wissenkerke Boei 7 | WISSKKBI7 | 38.617.00 | 403.412.00 |
| Yerseke Boei PK3 | YERSKBIPK3 | 67.821.00 | 388.242.00 |

27.3 Monsterneming

Per meetlocatie zijn 2 x 50 stuks levende en verwaterde mosselen nodig voor analyses. Er worden door de meetinformatiedienst van Rijkswaterstaat Zeeland (op een nader te bepalen locatie) mosselen '*Mytilus edulis*' verzameld en naar de locatie Jacobahaven in Zeeland gebracht. Daar worden de mosselen voorbereid door de Waterdienst en uitgehangen om te verwateren. Vervolgens worden de mosselen op de meetlocaties door de meetinformatiedienst uitgehangen en na 6 weken weer opgehaald.

Een deel van de mosselen, totaal 100 stuks worden ingevroren en later vervoerd naar de waterdienst in Lelystad. Dit deel betreft monsters voor vastleggen nulsituatie en vallen onder de lokatie jacobahaven ([JACBHVN](#))

Parallel aan het onderzoek worden siliconensheets (kunstmatig sorptiemedium) bij de uitgehangen mosselen geplaatst, voor de zgn. Solid Phase Passive Sampling (SPS).

27.4 Contactpersonen

28 Onderzoek Oosterschelde, hoogwater vogeltellingen

28.1 Werkgebied

Oosterschelde

28.2 Monsterneming

Wordt uitgevoerd met een vaartuig van de meetinformatiedienst van Rijkswaterstaat Zeeland.

De telling wordt uitgevoerd door de Waterdienst.

Opstapplaats Colijnsplaat.

28.3 Contactpersonen

RWS Waterdienst, cluster monitoring, zie organisatieschema blz 389.

29.2 Monsterneming

De monsterneming wordt uitgevoerd door de meetinformatiedienst van Rijkswaterstaat Noordzee.

De 'bederf-kritische' monsters (nutriënten, chlorofyl) worden aan boord gefiltreerd en geconserveerd.

29.2.1 Monsternemingsdiepte

- 3½ meter onder de waterspiegel voor zowel water als zwevend stof;
- op spronglaag; indien geen spronglaag aanwezig op halve diepte (½D);
- 3 meter boven de waterbodem (B+3).

29.3 Contactpersonen

RWS Waterdienst, cluster monitoring, zie organisatieschema blz 389.

Opmerkingen voor tabel 1, 2 en 3 meetfrequentie oppervlaktewater Noordzee.

4w: winterbemonstering

½D: bemonstering op halve diepte of spronglaag

B+3: bemonstering op 3meter bover de waterbodem

3v en 4v: vertikaalbemonstering in zomerperiode

7z: zomerbemonstering

(vz): veldmeting zintuigelijk

(tot): is totaal

nf: na filtratie over 0,45 µm (=opgelost)

pg: particulier gebonden

kation: De organotin verbindingen in zoute wateren worden als kation gerapporteerd.

NH3: NH4 / (1+10(10,08-0,033*T - pH))

NO3: s_NO3NO2 - NO2

N: KJN+NO3+NO2

DIN: NO2+NO3+NH4

DIP: PO4

SALNTT: berekend uit T en GELDHD conform RWSV 913.00.W008

| Voordelta (Kustzone NCP), Slijkgat Boei SG14 | SLIJKGBISG14 | 003°59'19" | 051°51'17" |

30.3 Monsterneming

Per meetlocatie zijn 2 x 50 stuks levende en verwaterde mosselen nodig voor analyses. Er worden door de meetinformatiedienst van Rijkswaterstaat Zeeland (op een nader te bepalen locatie) mosselen '*Mytilus edulis*' verzameld en naar de locatie Jacobahaven in Zeeland gebracht. Daar worden de mosselen voorbereid door de Waterdienst en uitgehangen om te verwateren. Vervolgens worden de mosselen op de meetlocaties door de meetinformatiedienst van Rijkswaterstaat Zeeland uitgehangen en na 6 weken weer opgehaald.

Parallel aan het onderzoek worden siliconensheets (kunstmatig sorptiemedium) bij de uitgehangen mosselen geplaatst, voor de zgn. Solid Phase Passive Sampling (SPS).

31 Onderzoek Noordzee, macrozoöbenthos en sediment, biologisch meetnet

31.1 Werkgebied

Noordzee

31.2 Monsterneming

Monsterneming wordt uitgevoerd door een marktpartij Grontmij/AquaSense i.s.m. RWS Noordzee. Voor twee (VOORDTA 3 en VOORDTA 4) van de honderd locaties wordt de bemonstering uitgevoerd i.s.m. RWS Zeeland.

RWS Noordzee en RWS Zeeland stellen een boot, bemanning en bemonsteringsapparatuur ter beschikking, evenals faciliteiten voor het verzamelen van hydrografische gegevens.

Macrozoobenthos- en sedimentbemonstering wordt op elke locatie uitgevoerd en is vastgelegd in de opdrachtomschrijving.

De projectleider van de Waterdienst zorgt tijdig voor het aanleveren van een locatielijst met daarop vermeld het juiste coördinatenstelsel met bijbehorende coördinaten. Deze lijst zal tijdig aan de betrokken partijen worden toegestuurd.

Opm: - **jaarlijks** worden op **22 overeenkomstige locaties** sediment monsters genomen t.b.v. het chemischmeetnet.

- **één keer per drie jaar** wordt ten behoeve van het chemischmeetnet op **21 extra locaties** een sedimentmonster genomen. Volgende bemonstering: 2012 !

In de volgende vier subgebieden in de Noordzee wordt het macrozoobenthosmeetnet uitgevoerd:

- Kustzone
- Offshore
- Oestergronden
- Doggersbank

33.3 Monsterneming

De monsterneming van oppervlaktewater en zwevend stof wordt door de meetdienst van Rijkswaterstaat Noord-Nederland uitgevoerd.

33.3.1 Monsternemingsdiepte

Oppervlaktewater en zwevend stof op 1½ meter onder de waterspiegel.

33.4 Start monsterneming

De binnenste locaties van elke vaarroute worden tijdens lokaal laagwater bemonsterd.

33.5 Contactpersonen

Figuur 25. Bemonsteringsprogramma Mosselmeetnet: ABM Waddenzee

34 Onderzoek Waddenzee, mossel, ABM

Actieve biologische monitoring voor het chemisch meetnet MWTL: onderzoek naar cummulatie van chemische contaminanten in uitgehangen mosselen en siliconensheets.

34.1 Werkgebied

Waddenzee

34.2 Meetlocaties

| <u>Gebied, locatieomschrijving</u> | <u>DONAR-code</u> | <u>RD^x [cm]</u> | <u>RD^y [cm]</u> |
|------------------------------------|-------------------|----------------------------|----------------------------|
| Waddenzee west, Malzwin | MALZN | 122.343.00 | 556.360.00 |
| Waddenzee oost, Dantzigat | DANTZGT | 177.600.00 | 601.700.00 |

34.3 Monsterneming

Per meetlocatie zijn 2 x 50 stuks levende en verwaterde mosselen nodig voor analyses. Er worden door de meetinformatiedienst van Rijkswaterstaat Zeeland (op een nader te bepalen locatie) mosselen '*Mytilus edulis*' verzameld en naar de locatie Jacobahaven in Zeeland gebracht. Daar worden de mosselen voorbereid door de Waterdienst en uitgehangen om te verwateren. Vervolgens worden de mosselen op de meetlocaties door de meetinformatiedienst van Rijkswaterstaat Noord-Nederland uitgehangen en na 6 weken weer opgehaald.

Parallel aan het onderzoek worden siliconensheets (kunstmatig sorptiemedium) bij de uitgehangen mosselen geplaatst, voor de zgn. Solid Phase Passive Sampling (SPS).

34.4 Contactpersonen

RWS Waterdienst, cluster monitoring, zie organisatieschema blz 389.

Figuur 26. Bemonsteringsprogramma Eems-Dollard tocht 29

35 Onderzoek Eems-Dollard, oppervlaktewater en zwevend stof, tocht nr. 29

35.1 Werkgebied

Eems-Dollard

35.2 Meetlocaties

| Locatieomschrijving | DONAR-code | RD ^x [cm] | RD ^y [cm] | opm. |
|---------------------|------------|----------------------|----------------------|------|
| Huibertgat oost | HUIBGOT | 239.425.00 | 619.980.00 | KRW |
| Bocht van Watum | BOCHTVWTM | 256.400.00 | 597.100.00 | KRW |
| Groote Gat noord | GROOTGND | 272.952.00 | 592.318.00 | KRW |

35.3 Monsterneming

De monsterneming van oppervlaktewater en zwevend stof wordt door de meetdienst van Rijkswaterstaat Noord-Nederland uitgevoerd.

35.3.1 Monsternemingsdiepte

Oppervlaktewater en zwevend stof op 1½ meter onder de waterspiegel.

35.4 Start monsterneming

De binnenste locaties van elke vaarroute worden tijdens lokaal laagwater bemonsterd.

35.5 Contactpersonen

RWS Waterdienst, cluster monitoring, zie organisatieschema blz 389.

MID Noord-Nederland / IJsselmeergebied:

- projectleider NN: H.P. Bosgraaf, 0511-548449/ 06-22404715, peter.bosgraaf@rws.nl
- meetcoördinatie NN: M. Hansen; Magiel.Hansen@rws.nl; 0511-54 84 32 / 06- 53400813

35.6 Datum monsterneming Eems-Dollard tocht 29

Weeknummers conform ISO 8601, voor opp.w. bemonstering geldt: 1e/15e ±5 dagen tussen [] : minimaal benodigde hoeveelheid nat centrifugeslib

Opm:

Na overleg en met goedkeuring van de Waterdienst is besloten de positie van Raai J op het Balgzand, nu voor een belangrijk deel subtidal gelegen, gefaseerd op te schuiven.

In een periode van 5 jaar wordt de raai in de lengterichting jaarlijks 100 m in zuidoostelijke richting verschoven, met de bedoeling om na deze periode tot een min of meer geheel intertidale raai te komen.

De posities van begin en eindpunt van raai J voor de komende jaren zijn in onderstaand schema vastgelegd.

Let op: x- en y coördinaten in RD stelsel)

| jaar | begin | begin | eind | eind |
|-----------------|--------|--------|--------|--------|
| | X | Y | X | Y |
| 2009 (vj en nj) | 122040 | 555260 | 122576 | 554440 |
| 2010 (vj en nj) | 122095 | 555176 | 122631 | 554357 |
| 2011 (vj en nj) | 122149 | 555093 | 122686 | 554273 |
| 2012 (vj en nj) | 122204 | 555009 | 122740 | 554189 |
| 2013 en later | 122259 | 554925 | 122795 | 554106 |

37.1.2 Monsterneming en analyse

Monsternemingen worden uitgevoerd door de marktpartij Koeman en Bijkerk of door het NIOZ, evenals de analyse op Macrozoobenthos.

Analyse van de sedimentmonsters wordt uitgevoerd door het laboratorium van de Waterdienst.

De etiketten en bemonsteringslijsten voor de sedimentmonsters zijn afkomstig van RWS Waterdienst.

Resultaten van de sedimentanalyses worden t.b.v. van de eindrapportage aan Koeman en Bijkerk en het NIOZ geleverd.

37.1.3 Contactpersonen

RWS Waterdienst, cluster monitoring, zie organisatieschema blz 389.

| Eems-Dollard, Delfzijl zeehavenkanaal | DELZZHVKNL | 259.389.00 | 593.996.00 | Sovon |

38.3 Monsterneming en analyse

Per locatie zullen van één of beide vogelsoorten eieren worden verzameld. De uitvoering hiervan vindt plaats in overeenstemming met door het IfV (zie onder) geleverde werkvoorschrift en zal worden uitbesteed aan SOVON Vogelonderzoek Nederland en Natuurmonumenten, zie tabel hierboven. De analyse naar chemische contaminanten in de eieren zal worden uitbesteed aan het *Institut für Vogelforschung* (IfV). Uiterlijk 1 juli 2009 zullen de eieren worden geleverd aan het IfV.

38.4 Tijdpad

Het rapen van eieren van de scholekster zal in de periode begin mei tot ca. half mei worden uitgevoerd. Het rapen van eieren van de visdief zal in de periode ca. half mei tot begin juni worden uitgevoerd.

Opmerkingen

nf : na filtratie over 0,45 µm

kation: De organotin verbindingen in zoute wateren worden nog steeds als kation gerapporteerd.

NH3 : $\text{NH}_4 / (1 + 10^{(10,08 - 0,033 * T - \text{pH})})$

NO3 : s_NO3NO2 - NO2

N : KjN+NO3+NO2

DIN : NO2+NO3+NH4

DIP : PO4

SALNTT: berekend uit T en GELDHD conform RWSV 913.00.W008

Bijlage 3 Referentiekaart veldwaarnemingen

| Schaalcijfer Beaufort | Windsnelheids- equivalenten (op 10 meter hoogte boven vlak terrein) | Benaming | | Beschrijving van de zichtbare uitwerking van de windkracht <ul style="list-style-type: none"> op objecten in het binnenland op zee |
|--------------------------|---|------------------|---------------------|---|
| | | boven zee | boven land | |
| 0 | gem. 0,1 m/s <1 km/u | Stilte | Windstil | <ul style="list-style-type: none"> Rook stijgt recht of bijna recht omhoog. Spiegelgladde zee |
| 1 | gem. 0,9 m/s 1 - 5 km/u | Flauw en stil | Zwakke wind | <ul style="list-style-type: none"> Windrichting goed herkenbaar aan rookpluimen. Golfjes welke de zee een geschud aanzien geven; schuimvorming heeft niet plaats. |
| 2 | gem. 2,5 m/s 6 - 11 km/u | Flauwe koelte | | <ul style="list-style-type: none"> Bladeren beginnen te ritselen en windvane kunnen gaan bewegen. Wind begint merkbaar te worden in het gelaat. Kleine golven; nog golf toppen maar beter gevormd; de toppen hebben een glasachtig aanzien en breken niet. |
| 3 | gem. 4,4 m/s 12 - 19 km/u | Lichte koelte | Matige wind | <ul style="list-style-type: none"> Bladeren en twijgen zijn voortdurend in beweging. Kleine golven; de golf toppen beginnen te breken en het hierdoor gevormde schuim heeft een overwegend glasachtig aanzien; hier en daar komen op zichzelf staande witte schuimkoppen voor. |
| 4 | gem. 6,7 m/s 20 - 28 km/u | Matige koelte | | <ul style="list-style-type: none"> Kleine takken beginnen te bewegen. Stof en papier beginnen van de grond op te dwarrelen. Kleine, langer wordende golven; de witte schuimkoppen beginnen vrij veel voor te komen. |
| 5 | gem. 9,3 m/s 29 - 38 km/u | Frisse bries | Vrij krachtige wind | <ul style="list-style-type: none"> Kleine bebladerde takken maken zwaaiende bewegingen. Er vormen zich gekuifde golven op meren en kanalen. Matige golven, van aanmerkelijk grotere lengte; overal zijn witte schuimkoppen te zien en hier en daar komt opwaaiend schuim voor. |
| 6 | gem. 12,3 m/s 39 - 61 km/u | Stijve bries | Krachtige wind | <ul style="list-style-type: none"> Grote takken bewegen. Parapluies kunnen slechts met moeite worden vastgehouden. Grotere golven beginnen zich te vormen; de brekende koppen doen overal grote witte schuimvlekken ontstaan en opwaaiend schuim komt vrij veelvuldig voor. |
| 7 | gem. 15,5 m/s 50 - 62 km/u | Harde wind | | <ul style="list-style-type: none"> Gehele bomen bewegen. De wind is hinderlijk wanneer men er tegen in loopt. De golven worden hoger en het witte schuim van de brekende koppen begint zich als strepen in de richting van de wind te ontwikkelen. |
| 8 | gem. 18,9 m/s 62 - 74 km/u | Stormachtig | | <ul style="list-style-type: none"> Twijgen breken af. Fietsen en lopen wordt bemoeilijkt. Matige hoge golven met aanmerkelijke kamlengte; de toppen van de golven waaien af en vormen goed ontwikkelde schuimstrepen in de richting van de wind. |
| 9 | gem. 22,6 m/s 75 - 88 km/u | Storm | | <ul style="list-style-type: none"> Lichte schade aan gebouwen. Schoorsteenkappen en dakpannen worden afgerukt. Hoge golven; zware strepen schuim in de richting van de wind; de karakteristieke rollers beginnen zich te vormen; het zicht kan door verwaaid schuim worden beïnvloed. |
| 10 | gem. 26,4 m/s 89 - 102 km/u | Zware storm | | <ul style="list-style-type: none"> Ontwortelde bomen. Aanzienlijke schade aan gebouwen enz. (Dergelijke gemiddelde windsnelheden komen boven land zelden voor). Zeer hoge golven met lange overstortende golfkammen; grote oppervlakken schuim worden door de wind in zulke zware strepen verspreid dat de zee een wit aanzien krijgt; zware overslaande rollers; het zicht is door verwaaid schuim verminderd. |
| 11 | gem. 30,6 m/s 103 - 117 km/u | Zeer zware storm | | <ul style="list-style-type: none"> Uitgebreide schade. Buitengewoon hoge golven (kleine en middelmatig grote schepen verliezen elkaar in de golfdalen (tijdelijk uit zicht); de zee is geheel bedekt met lange in de windrichting lopende schuimstrepen; de randen van de golfkammen verwaaien overal; het zicht is sterk verminderd. |
| 12 | >32,6 m/s > 117 km/u | Orkaan | | <ul style="list-style-type: none"> Komt op land zeer zelden voor. De lucht is met schuim en verwaaid zeewater gevuld; de zee is volkomen wit door schuim; zicht op enige afstand bestaat niet meer. |

Bijlage 5 Overeenkomst Waterdienst en RIWA uitwisseling waterkwaliteitsgegevens

De Waterdienst heeft met RIWA sectie RIJN en RIWA sectie MAAS samenwerkingsovereenkomst cq. samenwerkingsovereenkomst voor de uitwisseling van waterkwaliteitsgegevens. In tabel 1 zijn de meetlocaties vermeld en de soort gegevens waarover meetgegevens worden uitgewisseld. De meetfrequenties per stof en de exacte meetdata zijn elders in dit document weergegeven. In tabel 2 zijn de aanleverdata voor de gegevensoverdracht vermeld. De gegevensoverdracht vindt per e-mail plaats middels het dataformat DONAR Interface File ASCII (DIA). In tabel 3 zijn de contactpersonen weergegeven.

Tabel 1a. Meetlocatie en meetgegevens Rijn

| Locatieomschrijving, WD code | WD levert aan RIWA RIJN | RIWA RIJN levert aan WD |
|------------------------------|-------------------------|-------------------------|
| Lobith ponton, LOBPTN | Steekmonsters water | |
| Nieuwegein, NIEUWGN | | Steekmonsters water |
| Andijk, ANDK | | Steekmonsters water |
| Nieuwersluis, NIEUWSS | | Steekmonsters water |

Tabel 1b. Meetlocatie en meetgegevens Maas

| Locatieomschrijving, WD code | WD levert aan RIWA MAAS | RIWA MAAS levert aan WD |
|------------------------------|-------------------------|-------------------------|
| Eijsden ponton, EIJSPTN | Steekmonsters water | |
| Keizersveer, KEIZVR | | Steekmonsters water |
| Brakel, BRAKL | | Steekmonsters water |
| Scheelhoek, SCHEELHK | | Steekmonsters water |
| Heel, HEEL | | Steekmonsters water |

Tabel 2. Data gegevensoverdracht

| Gegevens betreffende de periode | Uiterlijke aanlevertermijn | Status meetgegevens |
|---------------------------------|----------------------------|---|
| 01/01/2009 - 31/12/2009 | 31 maart 2010 | Gevalideerd op volledigheid en plausibiliteit |
| 01/01/2010 - 31/03/2010 | 30 juni 2010 | Niet gevalideerd |
| 01/04/2010 - 30/06/2010 | 30 september 2010 | Niet gevalideerd |
| 01/07/2010 - 31/09/2010 | 31 december 2010 | Niet gevalideerd |
| 01/01/2010 - 31/12/2010 | 31 maart 2011 | Gevalideerd op volledigheid en plausibiliteit |

Tabel 3. Contactpersonen

| Partij | Contactpersoon |
|-------------|---|
